THE REAL « WIRELESS »

Mini Temperature Data logger  
to put inside your chamber

Non contractual photo

Part nr. 11567

## Presentation

The Nano SPYT1 sensor measures, records temperature and transmits its data to a nearby LINK module via 2.4 GHz radio frequency communication. The data are then automatically sent to the JRI secure Cloud for hosting, and will be managed on the JRI MySirius web application.

If thresholds are exceeded, alerts are transmitted in real time to react immediately.

Small and robust, it is designed to monitor temperature directly from inside the chambers.

The calibration can be realized by simple exchange.
